(This is the link, The part of the video to start at is at 12.12 and ends at 17.04 The first two minutes are about how genes from GMO foods can transfer to our bodies, and the second 3 minutes are about how children are more at risk and how independent research is needed. The main speaker is a best selling author, Jeffrey Smith, that I would say is stirring up fear of GMO foods to sell books. We could find no evidence of a back ground in Science, but We am continuing to look for one. This video makes a lot of claims but doesn't show and evidence other than observational.)
